**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 20, drawn to the data transmission method in the said transmission network, wherein network in which appliances are connected through a predetermined bus line and said command is executed by asynchronous/isochronous communication on said bus line, classified in class 709, subclass 236.
- II. Claims 7-19, drawn to a data transmission method over a predetermined radio network, classified in class 455, subclass 420.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group II has separate utility such as remote programming control. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
